

Primary Therapy Source offers the LSVT BIG program for individuals with Parkinson's Disease. LSVT BIG is "an intensive, amplitude focused physical and occupational therapy approach developed from principles of the effective Parkinson's specific speech treatment LSVT LOUD®."

The National Institutes of Health has funded LSVT LOUD and BIG research for over 25 years. The current research shows improvements in motor planning related to:

- Faster walking with bigger steps
- Improved functional balance
- Increased trunk rotation
- Improvements in activities of daily living such as bed mobility
- Improved UPDRS Motor Score

"LSVT BIG is a standardized treatment protocol, which is customized to the unique goals of each patient including both gross and fine motor skills. LSVT BIG can be adapted or progressed in order to meet each patient's needs across a range of disease severity and presenting impairments."

Primary Therapy Source looks forward to connecting with individuals in the Twin Falls community who are impacted by Parkinson's Disease to help promote independence and functional movement.

We look forward to your referrals and support regarding further implementation of this program.

Please call with any questions or follow-up information.:
